

REDPOINT GLOBAL INFRASTRUCTURE STRATEGY

CAPTURING THE ESSENCE OF THE ASSET CLASS – 30 JUNE 2017

INVESTMENT OBJECTIVE

Redpoint's global infrastructure strategy provides diversification, inflation protection and more stable returns, relative to global equities. The strategy aims to outperform its benchmark after fees, and the majority of competing strategies, over rolling five-year periods. Individual client portfolios can be managed on a hedged or unhedged basis.

ABOUT REDPOINT

Redpoint's experienced team crafts global quantitative equity solutions characterized by:

- > **INSIGHT** into the economics of financial markets,
- > **DESIGN** to balance opportunity, cost and risk,
- > **FOCUS** to achieve customized client objectives.

Collaboration, experience and a breadth of knowledge, yield well-engineered solutions.

INVESTMENT PROCESS

The economic drivers of infrastructure firms create an asset class promising lower volatility and higher dividend yield than global equities. To capture these diversification and income benefits, investors are challenged by the composition of active and passive strategies.

Popular global infrastructure benchmarks appear diversified, with 75, 100 and more than 150 constituents, depending on the index vendor. However, fewer than 20 stocks account for more than half of the index weight in each case – a direct consequence of market-cap weighting.

Most active strategies are concentrated by design. Holding multiple managers has little impact on concentration risk, with the relatively small size of the asset class resulting in common holdings across managers. In practice, an active or passive infrastructure allocation will typically place a significant bet on the performance of just a few firms.

Redpoint's investment insight addresses these challenges. To reduce concentration, the starting point for our strategy is a universe of large, mid and small-cap stocks focussed on core infrastructure activities; systematically weighted to reflect their risk contributions to the asset class.

To bolster the income and risk benefits associated with the asset class, our strategy actively targets sustainable dividend yield, while limiting exposure to firms with excessive leverage and poor 'quality' characteristics. Proprietary sustainability metrics identify poorly managed firms and focus investment in quality companies expected to succeed over the long term.

Quantitative portfolio construction balances these return focused elements against stock specific risk. Since hedging to reduce return volatility is consistent with the defensive nature of the asset class, the strategy can be customized to suit clients' currency management preferences. With insight and design expertise, the Redpoint Global Infrastructure Strategy is a broadly diversified portfolio that captures the essence of the infrastructure asset class.

INVESTMENT PERFORMANCE

All current portfolios are fully, passively hedged to the Australian dollar. Composite Strategy and Index performance are presented fully hedged to the Australian dollar. The Active return is the actual historical excess return realized relative to the index. This is a reasonable approximation of the excess return that could have been achieved if the strategy had been managed on an unhedged basis or hedged into a different currency.

| Composite performance as of March 2017 | 1 month (%) | 3 months (%) | 6 months (%) | 1 year (%) | 2 years (% p.a.) | 3 years (% p.a.) | Since Inception (% p.a.) |
|--|-------------|--------------|--------------|------------|------------------|------------------|--------------------------|
| Fund return (gross) ¹ | 3.65 | 0.76 | 1.10 | 14.16 | 4.77 | 11.35 | 13.86 |
| Benchmark return ² | 3.31 | 0.53 | 1.22 | 13.76 | 3.04 | 10.22 | 13.05 |
| Active return | 0.34 | 0.23 | -0.12 | 0.40 | 1.73 | 1.13 | 0.81 |

¹ Composite gross returns are before taxes and management fees, but after transactions costs.

² FTSE Developed Core Infrastructure Index with net dividends reinvested – hedged to Australian dollars. Benchmark returns do not allow for management fees and transaction costs.

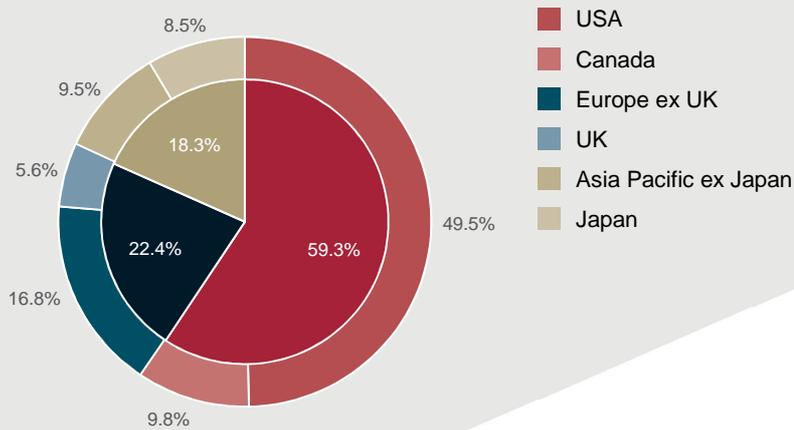

TOP 10 HOLDINGS

| | Fund (%) | Benchmark (%) |
|----------------------------|----------|---------------|
| Union Pacific Corporation | 2.52 | 5.19 |
| CSX Corporation | 2.05 | 2.07 |
| TransCanada Corporation | 2.05 | 2.36 |
| East Japan Railway Co. | 1.88 | 1.97 |
| Duke Energy Corporation | 1.81 | 3.26 |
| National Grid plc | 1.78 | 2.70 |
| NextEra Energy Inc | 1.75 | 3.39 |
| Enel SpA | 1.68 | 0.00 |
| Central Japan Railway Co. | 1.65 | 1.81 |
| Spectra Energy Corporation | 1.61 | 1.75 |

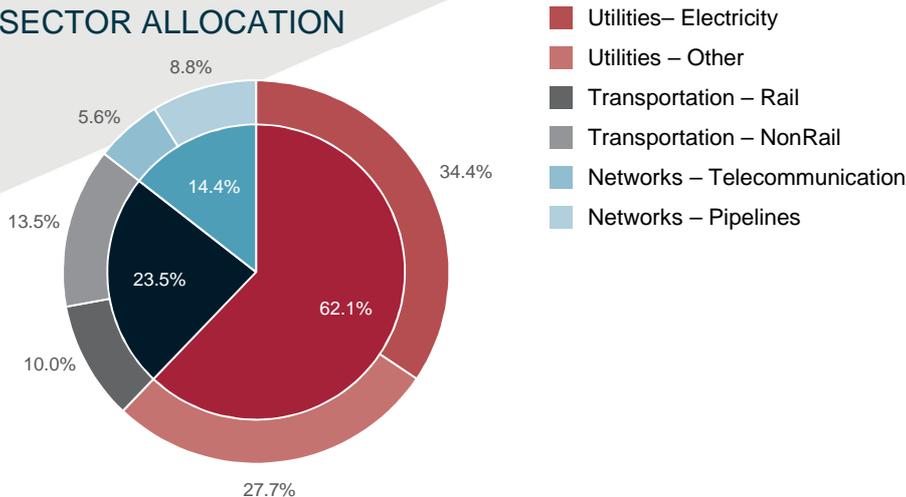

SUMMARY STATISTICS

| | Statistic |
|---------------------------|--------------|
| Inception Date | 3 April 2012 |
| FUM (USD millions) | \$130.5 |
| Number of Holdings | 127 |
| Predicted Beta | 1 |
| Predicted Tracking Error | 2% 3% |
| Estimated Annual Turnover | 25% |
| Dividend Yield | 3.50% |

INSIGHT: INVESTING IN LISTED INFRASTRUCTURE

Infrastructure firms-utilities, telecom, transportation and energy companies-provide essential services to permit all modern economies to function. Given their critical role, infrastructure firms are often highly regulated to encourage efficient operation and reinvestment. Regulation insulates other economic sectors from price shocks that could be induced by infrastructure firms with pricing power associated with inelastic demand. In turn, regulation results in stable, inflation protected revenue streams. For investors, this stability and inflation protection provides a diversification opportunity by creating an asset class with an enhanced yield and lower volatility compared to global equities.

Despite the range of infrastructure benchmarks, the number of names within benchmarks tends to be relatively small. The FTSE Developed Core Infrastructure Index, for example, contains 150 stocks. With a small number of stocks to select from, peer group performance tends to be highly correlated reflecting the common holdings among managers. In this circumstance, management fees strongly influence actual performance realized by investors.

The Redpoint Infrastructure Strategy is engineered to account for these asset class characteristics to yield competitive after cost, risk adjusted performance.
